

A-MIS

A-ICE MULTIMEDIA INFORMATION SYSTEM

Simplifying your approach to communication and giving you greater control through a single, centralized solution.

OVERVIEW

Within airports, the flow of information in all its various forms is relentless. Managing and co-ordinating this flow is essential to get the right information to the people who need it as quickly as possible.

The A-ICE Multimedia Information System (A-MIS) enables you to handle all communication channels through a single, user-friendly web-based control panel that is capable of managing data and content in a wide variety of formats.

This centralized approach means messages can be dynamically delivered in the required format either to passengers or staff, keeping operations running smoothly and effectively.

A-ICE can provide strategic support to ensure your implementation is as effective as possible, helping to reduce costs in areas such as rationalization of information points, and taking a modular approach to system development.

KEY FEATURES

- Single, user-friendly web-based communications control panel.
- Configurable for users within different departments and locations.
- Clustered monitors for extended displays.
- Emergency override message displays.
- Remote monitoring and

maintenance.

- Free-text display.
- Timed sequencing for rolling displays.

PRODUCT DETAILS

- Full integration with existing systems and technologies.
- Delivery of combined and complex information.
- Automation of information-sharing process.
- Geo-referencing information for defined locations.
- Multi-device support.
- Administrative functions (billing, statistics, reports, etc.) and data analysis.
- Development plan techniques and co-ordination of personalized advertising campaigns.
- Special assistance audio/video for disabled passengers.
- Strategic support for security and emergency plans.
