

A-VMS

A-ICE VEHICLE MAINTENANCE SYSTEM

Monitoring the vehicle maintenance and repair process and managing every stage through a single, comprehensive platform.

OVERVIEW

Aviation is an industry built on vehicles, and keeping these valuable assets well-maintained and in fully operational condition requires careful management.

The A-ICE Vehicle Maintenance System (A-VMS) provides airline companies with a complete solution for managing and documenting the maintenance process.

A-VMS incorporates consideration of

all the necessary aspects of planning and operations, including task management, resourcing allocation and integration with external systems for spare parts management, such as SAP-PM.

For airline operators, it provides greater control and visibility over the repair and maintenance process, helping streamline the path from initial damage notification to check-out and return to operation.

KEY FEATURES

- Single platform for all aspects of vehicle maintenance and repair.
- Task management and real-time status monitoring.
- PDA application for on-the-ground information sharing and recording.
- Allocation of shifts, visibility of rosters, staff activity tracking.
- Work area allocation.
- Spare parts requests.

PRODUCT DETAILS

- Configuration and data recorded via master web application.
- GANTT-based scheduling of garage staff tasks.
- Online management of team rosters.
- Predefined statistics and reports.
- Web monitor application for real-time view of repair status.
- Integration webservice with Inform GroundStar® Roster.
